Preface

A decelerated growth at retail stage has continued in the fourth consecutive year, marking a growth rate of 1.4% in 2016. That is significantly lower than the average annual growth rate of 3.6% since the beginning of the century and the long-term growth rate of 3.1% since 1970.

Slowing dynamics necessitate a survey on world fiber and retail markets, their status, latest trends and outlook to explore opportunities. Hence, an intense appraisal along the textile value chain is required as globalization further advances.

The new service „Textile Per Capita Consumption 2005 - 2022“ analyzes 26 markets with a joint population of 4.7 billion in 2016 that is predicted to grow to 5.0 billion by 2022. It is structured in four parts according to the 2016 gross national income (GNI). Different countries around the world in terms of climatic conditions, income and population growth as well as vehicles in use equivalent for degree of industrialization have been analyzed.

Part 1: lower middle income category (Bolivia, Egypt, India, Indonesia and Philippines)

Part 2: upper middle income countries (Argentina, Brazil, PR China, Colombia, Mexico, Peru, Russia and Thailand)

Part 3: high income category (France, Italy, Japan, Korea, Slovenia, Spain and Taiwan)

Part 4: high income countries (Australia, Canada, Germany, Switzerland, United Kingdom and the United States)

Annual Dynamics in Fiber Consumption

Income Categories - GNI 2016 per capita, Atlas method (current U.S. Dollar)
