

TFY 2026

WORLD SURVEY
ON
TEXTILES & NONWOVENS

Guiding principle:

We are living in a world of misinformation, information overflow and erratic economic positions by now.

Quality research and reporting is more crucial than ever.

This annual yearbook is based on good judgement, experience, contacts and network
instead of
fast AI-generated snippets of supposed textile relevance.

Except as stated herein, none of the material may be reproduced, copied, distributed, republished, downloaded, displayed, posted, mirrored or transmitted in any form or by any means, including, but not limited to, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission of The Fiber Year GmbH.

This report contains forward looking statements based on information currently available to us and on our current projections and assumptions. By nature, forward looking statements are associated with known and unknown risks and uncertainties, as a consequence of which actual developments and results can deviate significantly from the assessment published in this report. Forward looking statements are not to be understood as guarantees. Rather, future developments and results depend on a number of factors; they entail various risks and unanticipated circumstances and are based on assumptions which may prove to be inaccurate. These risks and uncertainties include, for example, unforeseeable changes in political, economic, legal and business conditions, price developments, unexpected developments associated with acquisitions and affiliates and unforeseen risks associated with ongoing cost savings measures and to the competitive environment, interest rates and exchange rate fluctuations, to technological developments and other risks and unanticipated circumstances.

Every reference to this report should be indicated as follows „The Fiber Year 2026“.

All information investigated and compiled with reasonable care in this report is provided by The Fiber Year GmbH on an "as is" basis and The Fiber Year GmbH expressly disclaims any and all warranties. In no event shall The Fiber Year GmbH be liable for any direct, indirect, incidental or consequential damages of any kind whatsoever with respect to this report.

1.1 Foreword

Andreas Engelhardt
President
The Fiber Year GmbH
Roggwil, Switzerland
www.thefiberyear.com

About The Fiber Year

The Fiber Year GmbH, founded in 2010, aims to provide international expertise, analyses, strategy consulting and customized solutions to the international textile industry after 18 years in textile machinery manufacturing business with companies such as Bar-mag, Saurer Management and Oerlikon as senior manager for Oerlikon Textile International Business.

Numerous presentations at international conferences and publications prove the company's understanding of textile market forces. Corresponding views appeared in print media such as annabelle, AVR, Bio-based News, Bloomberg, Chemical Fibers International, China Textile Magazine, China Textile Leader, Der Spiegel, Der Standard, eco Institut, Frankfurter Allgemeine Zeitung, Fibre2Fashion, Finanz und Wirtschaft, Forward Textile Technology, ICAC Cotton Review Report, Indian Textile Journal, International Fiber Journal, Knitting Trade Journal, Kohan Journal, Melliand, Nonwovens Industry, Neue Zürcher Zeitung (NZZ), Oerlikon Fibers and Filaments, Schweizerische Umweltstiftung, Sustainable Nonwovens, Technical Textiles, Tecoya Trend, textile network, TEXTIL-plus, TextilWirtschaft, U.S. Congressional Research Service, WirtschaftsWoche, Zeit Online and others.

After 50 years of fiber production data reporting by Vereinigte Glanzstoff-Fabriken AG and The Fiber Year continuing this service from 2001, the year 2025 has experienced manmade fibers to expand beyond the magic threshold of 100 million tonnes. Another characteristic comprised supply of both natural and manmade fibers growing significantly faster than demand.

It takes a lot of efforts to complete this comprehensive annual textile yearbook and therefore I want to address sincere thanks to all companies, associations, colleagues and friends in helping and supporting me to make this issue.

All issues from 2011 have been produced thanks to support of Lenzing Group in many aspects. All market data, however, are result of the independent research by The Fiber Year GmbH. Hence, statements and conclusions do not necessarily reflect the assessment of the Lenzing Group.

Yours sincerely,

1.1 Foreword

Management Board of Lenzing AG (from left to right)

Georg Kasperkovitz, Chief Operations Officer

Mathias Breuer, Chief Financial Officer

Christian Skilich, MBA, LL.M., Chief Pulp and Chief Technology Officer

About the Lenzing Group

The Lenzing Group stands for the responsible production of specialty and premium fibers based on regenerated cellulose. As an innovation leader, Lenzing is a partner of global textile and nonwoven manufacturers and drives many new technological developments. The Lenzing Group's high-quality fibers are the raw material for a wide range of textile applications – ranging from functional, comfortable, and fashionable clothing through to durable and sustainable home textiles. TÜV-certified biodegradable and compostable Lenzing fibers are also ideal for demanding use in everyday hygiene applications.

The Lenzing Group's business model extends far beyond that of a traditional fiber producer. Together with its customers and partners, Lenzing develops innovative products along the value chain, adding value for consumers. The Lenzing Group strives for efficient utilization and processing of all raw materials and offers solutions for the transition of the textile industry from the current linear economic system to a circular economy. In order to align its commitment to limiting man-made climate change with the goals of the Paris Agreement, Lenzing has a clear, science-based climate action plan that provides for a significant reduction in greenhouse gas emissions (Scopes 1, 2, and 3) by 2030 and a net-zero target by 2050.

Dear Partners and Readers,

Once again, 2025 proved to be a challenging year for our industry. Global fiber markets remained volatile, and while segments of demand across the textile and apparel value chain began to show early signs of stabilization, sustained pricing pressure and ongoing uncertainty continued to weigh on the performance of the global fiber industry. Geopolitical tensions, shifting trade policies and volatile energy and raw material markets further complicated long-term planning and investment decisions.

Against this backdrop, one reality has become increasingly clear: resilience, focus and collaboration are no longer optional - they are imperative. As an industry, we must continue to advocate for open and fair markets, underpinned by a genuinely level playing field. These principles form the foundation of competitiveness and are essential to driving innovation, enabling investment and supporting sustainable growth on a global scale.

Beyond the immediate market environment, the textile and nonwovens industries are facing a more fundamental challenge – the need to accelerate the transformation towards more sustainable production and consumption models. While the technologies, solutions and know-how are available, progress at scale remains too slow. In 2025, the industry still faces unacceptably high levels of waste, greenhouse gas emissions and resource inefficiencies.

At Lenzing, sustainability has long been an integral part of our strategy and business model. In 2025, this commitment has translated into a clear strategic focus: we transform renewable raw materials into high-quality, cellulose-based premium fibers at industrial scale, while selectively investing in innovations that reduce environmental impact and strengthen long-term competitiveness. Over the past year, we have further refined our business model, reinforced our position in strategic premium segments and advanced the transformation of our organization with the clear objective of becoming more resilient, agile and profitable in an increasingly demanding market environment.

1.1 Foreword

Experience and history have consistently shown that sustainability and economic success go hand in hand. Investments in sustainable innovation are not cost drivers, but enablers of long-term competitiveness. Together with our customers and partners, we develop solutions that enhance productivity, improve efficiency, reduce resource consumption and minimize waste, delivering tangible business value across the entire value chain.

However, real impact can only be achieved through industry-wide collaboration, binding commitments and consistent execution. Tackling climate change and advancing circularity are not only a moral responsibility; they are a clear business imperative and a significant opportunity if we seize it collectively. To unlock this potential, supportive and reliable policy frameworks are essential. We therefore welcome initiatives aimed at strengthening a competitive, sustainable and low-carbon industrial base. Companies investing in sustainability need clear incentives, reduced administrative complexity and conditions that enable innovation to scale effectively.

May the reading of this edition of 'The Fiber Year' inspire reflection and action. Let us continue to rethink structures, processes and partnerships together so that an industry that has generated prosperity for decades can continue to do so responsibly in the future.

On behalf of the Management Board,

Georg Kasperkovitz (COO), Mathias Breuer (CFO), Christian Skilich (CPO & CTO)
